A vertical black and white halftone pattern consisting of a grid of dots. The pattern is composed of horizontal rows of small, square-shaped dots, creating a textured, dotted appearance. The density of the dots varies across the image, with more dots in darker areas and fewer dots in lighter areas, mimicking the effect of a grayscale photograph or a printed halftone image.

A grayscale spectrogram showing frequency over time. The vertical axis represents frequency, and the horizontal axis represents time. The spectrogram displays several distinct vertical bands of energy, with the most prominent one occurring around the 10-second mark.

A black and white halftone graphic featuring a stylized, abstract design composed of dots and lines. The design is divided into several rectangular sections, each containing a different pattern of dots. Some sections have horizontal lines running through them, while others are solid or contain vertical patterns. The overall effect is a high-contrast, geometric representation.

A horizontal black and white halftone graphic consisting of a dense grid of small dots. The dots are arranged in a staggered pattern, creating a textured, almost wood-grain-like appearance. The overall effect is a high-contrast, low-resolution print or digital representation of a surface.
